### NEW Red Head 10 oz Caulk Gun

- 26:1 Ratio
- The affordable high quality caulk gun for A7-10 use
- Available May 2006

**PART NUMBER: A100**

The **A7-10** is used in a caulk gun for fast and easy dispensing. When selecting a caulk gun, it is important to know how caulk guns are rated, which will help you choose the best one.

Caulk gun components vary from low to high in quality. Based on this quality, thrust ratios are assigned. We recommend using no less than a 14:1 thrust ratio. To determine the ratio for a particular caulk gun, please contact the caulk gun manufacturer.

When using a low grade/ratio caulk gun, dispensing is difficult with any product in adverse temperature conditions. Fatigue sets in quickly and makes completion of the project slow.
